

Module Introduction Transcript

Hello everyone, welcome to module 11 of our course statistical inference and modelling. So far we have studied estimation methods such as confidence interval and hypothesis testing. In this module, we will introduce one of the most important widely used estimation method in statistics, maximum likelihood estimation or MLE.

The module learning objectives are as follows. First, you will understand the intuition behind maximum likelihood estimation. Second, you will learn how to construct and interpret the likelihood functions.

Third, you will learn how to derive and compute maximum likelihood estimators and study their properties. By the end of this module, you will have a solid foundation in maximum likelihood estimation methods which forms the basis of modern statistical inference and very extremely used in machine learning and applied research. So, let us begin.
